

## InDiago 510

Diagonal & Vertical Wall Cabinet Lift – Electric

The InDiago 510 - is an **electric height adjustable shelving lift system** which is installed inside the wall cabinet. This innovative design combines key features of the Verti and Diago systems.

It **lowers** and **raises** the entire shelving system **out** and **down** in an arc-shape motion (diagonal) to the front of the worktop surface at the touch of a button.

This enables the user to access contents from the wall cabinet in an **easy** and **safe** manner, either in a **seated** or **standing** position. Encouraging increased participation and independence.

Movement can be stopped at a chosen height. A safety trip panel is included, which is installed underneath the system. This stops the lift from lowering in the event of obstruction.

The InDiago 510 is supplied as a complete system and can be installed into **new** and **existing** wall cabinets (easy to retrofit) or **relocated** (if required). Used separately or in conjunction with worktop lifts to totally adapt the space.

Our height adjustable wall cabinet lift systems help to create **adaptable** and **functional** environments for individuals and facilities. This **assistive technology** caters for all ages, varying needs and abilities. **HOW** - by making it easier, safer and more convenient to perform everyday tasks. Promoting participation and independence and improving **accessibility** for all.

## InDiago 510

### Diagonal & Vertical Wall Cabinet Lift – Electric
