

## MANULIFT 6380H – Worktop Lifts

The Manulift 6380H is a **manual WALL mounted height adjustable worktop lift system**, it is used to **lower and raise worktops vertically**. The manual solution is applicable for **occasional adjustment**. For frequent adjustments, electric applications are more suitable.

The wall mounted **worktop is adjusted manually** up to 30 cm by 2.5cm intervals. The height is adjusted by loosening the wall bracket's screws and then moving the worktop to the height required.

It can be used in **seated** or **standing** positions. The open area below/underneath the worktop surface provides extra space for legs and knees, thus allowing for easy and direct access.

The 6380H series has **increased** frame height for installation the of **sinks, cooktops, draws and chopping boards**. Equipment in the worktop surface is selected according to the desired function.

Other options – manual systems can be converted to electric systems in required in the future.
