

Diago 504

Diagonal Wall Cabinet Lift System – Electric

Diago 504 - is an **electric height adjustable wall cabinet lift system**. It **lowers** and **raises** the wall cabinet system **out** and **down** in an **arc-shape** motion (diagonal) to the front of the worktop surface at the touch of a button.

This enables the user to access contents from the wall cabinet in an **easy** and **safe** manner, either in a **seated** or **standing** position. Encouraging increased participation and independence.

Movement can be stopped at a chosen height. A safety panel is included, which is installed underneath the system. This stops the lift from lowering in the event of obstruction.

Diago 504 lift system can use **new** and **existing** wall cabinets (conditions apply) or **relocated** (easy to retrofit). Used separately or in conjunction with worktop lifts to totally adapt the space.

Our height adjustable wall cabinet lift systems help to create **adaptable** and **functional** environments for individuals and facilities. This **assistive technology** caters for all ages, varying needs and abilities.

HOW - by making it easier, safer and more convenient to perform everyday tasks. Promoting participation and independence and improving **accessibility** for all.

Diago 504
