

WASHBASIN BRACKET

Basicline 406 Washbasin Bracket - Manual Height Adjustable Lift System

Basicline 406 is a **height adjustable washbasin bracket lift** with a **built-in gas spring** which helps to adjust the height of the washbasin to the desired position, no tools required.

Used to **lower** and **raise washbasins vertically**.

The system is designed for use in **seated** or **standing** positions to improve accessibility and **usability** for individuals and carers. Designed for infrequent adjustment by individuals or carers.

It provides easy and direct access in a seated position, compared to side access with standard, non-adjustable washbasins or vanities. Making it easier, safer, less stress and strain for users and carers.

Mirrors or cabinets can be mounted above. Different basins can be mounted on the bracket to suit lift and flexible waste plumbing systems are recommended for height adjustment which can be sourced and supplied in Australia.

Our height adjustable washbasin bracket lift system help create **adaptable** and **functional** environments for individuals and facilities. This **assistive technology** caters for all ages, varying needs and abilities whilst promoting participation and independence.
