

WASHBASIN BRACKET

Basicline 415 - Washbasin Bracket - Electric Height Adjustable Lift System

Basicline 415 is an **electric height adjustable washbasin bracket lift system**. Used to **lower** and **raise washbasins vertically** at the touch of a button, via a cord-connected control.

The system is designed for use in **seated** or **standing** positions to improve accessibility and usability for individuals, multiple users and carers. **Designed for frequent or daily adjustment.**

It provides easy and direct access in a seated position, compared to side access with standard, non-adjustable washbasins or vanities. Making it easier, safer, less stress and strain for users and carers.

A safety system stops the lowering when in contact with the user's legs to prevent any crushing or potential injuries. Mirrors or cabinets can be mounted above. Different basins can be mounted on the bracket to suit lift. Plumbing is via flexible waste systems hidden behind cover panel.

Our height adjustable washbasin bracket lift systems help create **adaptable** and **functional** environments for individuals and facilities. This **assistive technology** caters for all ages, varying needs and abilities whilst promoting participation and independence.
